

# Ultra High Pressure Water Blasting

Specialized Services with Quality Results

Tough, hazardous and contaminated materials can be safely removed from any kind of surfaces with Ultra High Pressure water blasting. It is fast, efficient and the most ecological process. It uses no chemicals & no abrasives - only water at ultra high pressures. With Ultra High Power water blasting, no potentially contaminated dust particles is released into the air, which is most important when dealing with highly hazardous contaminants. Ultra High Pressure water blasting is a widely used process for the removal of material, coating or contamination from surfaces.
